

Zoology I Flashcards

For Lesson 13 Project

These Flashcards are designed to teach your child the insect orders. I recommend you print them on cardstock. One side of the card will have the insect image, the other side will have the order name.

Simply print one side, then turn the printed page over and print the other side.

If you would like your child to learn more about insects, such as the different kinds of butterflies, visit insectimages.com for more images. Be certain to check a field guide to make sure you are learning about insects that are commonly found in your area.
