### Camels: How do camels walk across the sand without sinking?

Procedure (What we did):

We used different sized discs  
and tried to push them around  
in the sand

Hypothesis (What I think will happen):

small - going to sink  
large - not going to sink

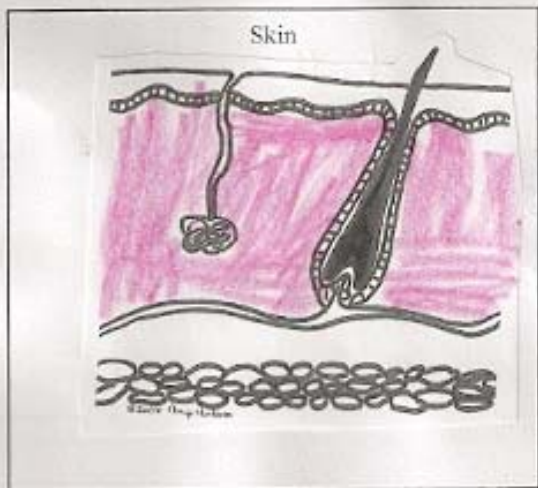

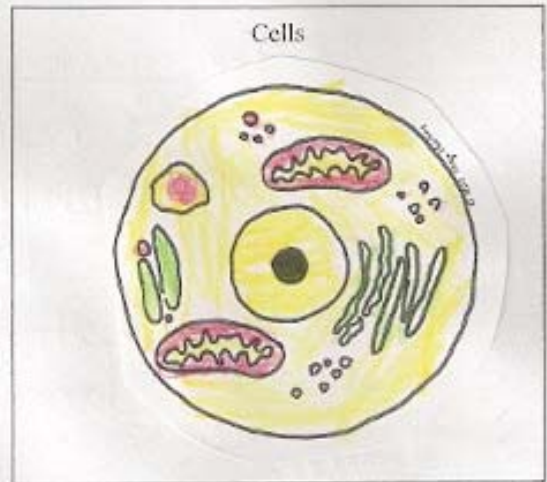

Results (What happened):

- small disc sunk
- large disc smoothed surface
- the pencil sinks
- medium size disc sunk to

Conclusion (What I learned):

the bigger the disc the less  
it sinks

Cells are the building blocks of our body. We have billions of them

The two layers of skin are:  
epidermis  
dermis

Hair can be straight, wavy and curly. Hair grows one inch in 10 weeks

## Ridged (Dime Experiment) Why do my fingertips have ridges?

Procedure (What we did):

We tried to move a coin.  
Once normal once with a bag  
on my finger.

Hypothesis (What I think will happen):

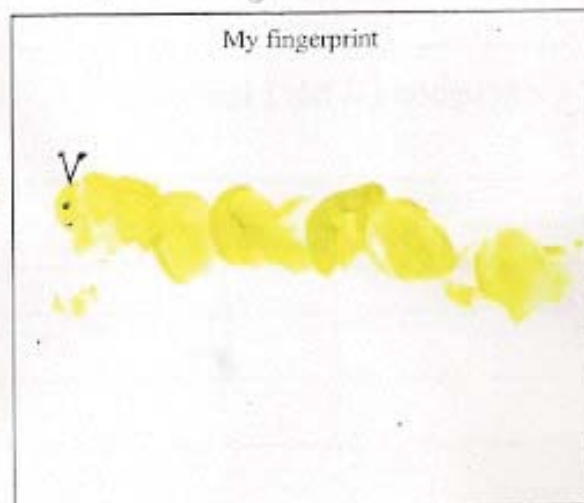

I thought it would be easy  
both easy both times

Results (What happened):

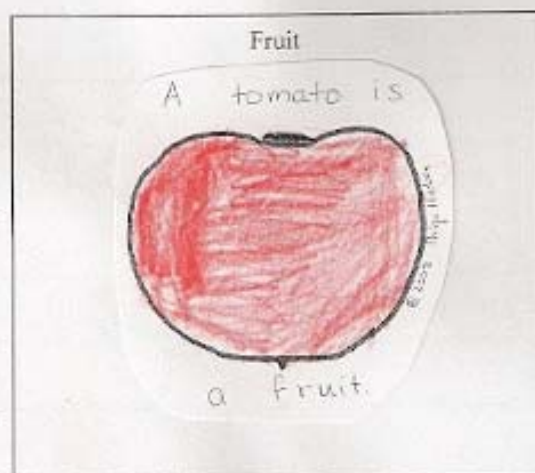

It moved when I didn't have  
the plastic bag on my finger I  
couldn't move it  
with the plastic bag

Conclusion (What I learned): <sup>on my</sup>  
finger.

The ridges  
on my finger help  
me to move things.

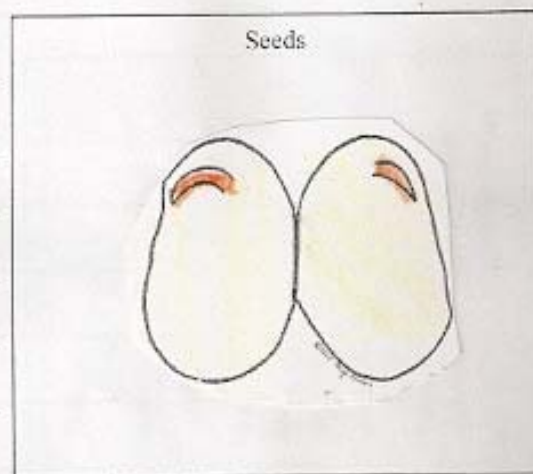

Fruit protects  
the seed and it  
helps move the  
seed away

Why do plants have fruit?

They need fruit to help  
the plant move its  
seeds.

Seed contain  
plant food and a  
baby plant

## Inside Out

### What's on the outside of a pinto bean?

What I discovered about pinto bean seeds...

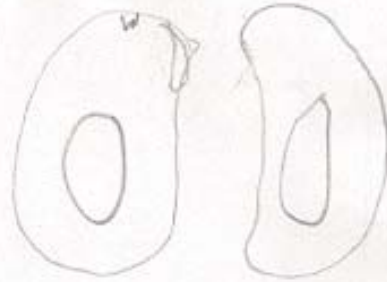

- there is a seed coat on the outside

- inside are two beans.

- one has a baby plant ready to grow.

- the two halves blow easily off my hand.

What my seed looked like inside

What my seed looked like outside
